Supplemental Tube Feeding Considerations Erin Sundseth Ross, Ph.D., CCC-SLP

Timing: 40:30 minutes

Not all babies will be oral feeders. And many babies need supplemental tube feedings both in the NICU and after discharge to home. This webinar provides information about how to use supplemental tube feedings to help babies in the NICU, as well as at home. It also provides practical intervention strategies for professionals who are assisting these babies and their families to transition from tube feedings to more oral feedings, as appropriate.

OBJECTIVES:

- Describe at least one effect of long-term naso-gastric (NG) tube use on feeding development
- List at least one factor that impacts how tube feeding affects the development of normal eating and drinking skills

AGENDA:

Standards, competencies, and best practices for infant and family centered developmental care in the ICU: 0-4:19

Pros and cons of NG and G-Tubes: 4:20-16:03

Goals for Tube Feedings: 16:03-17:00

Influence of Rate, Delivery Method, and Volume: 17:00-23:10

Supportive interventions during tube feedings: 23:10-31:08

Enteral vs Gravity feedings in the NICU and at Home: 31:08-33:55

Combining pump and oral feedings: 33:55-40:30
